

# Maintenance

Gas distribution equipment:  
Automatic switch-over or module

The automatic switch-over panel is equipment that is continuously enabled. It reduces the gas pressure from 200-300 bar to the desired pressure for your application.

The safety conditions of these types of equipment that process gas at high pressures can be guaranteed with accurate maintenance of the installation.

The maintenance service of Air Liquide will accompany you in the process.

## SERVIGAS 1

A maintenance contract that will relieve you from the responsibility of maintaining your gas distribution equipment.

A visit once a year will ensure the quality of your gas, the efficiency of your system, and the early detection of possible complications.

# SERVIGAS 1

~70 control points

Air Liquide equipment only

## Components

- Preventive maintenance
- Exceptional event maintenance
- Leakage tests

## Detailed commitment

- **One visit a year**
- **Materials invoiced at cost**

## Deliverables

- **Maintenance report**
- **Safety information**

## Your benefits

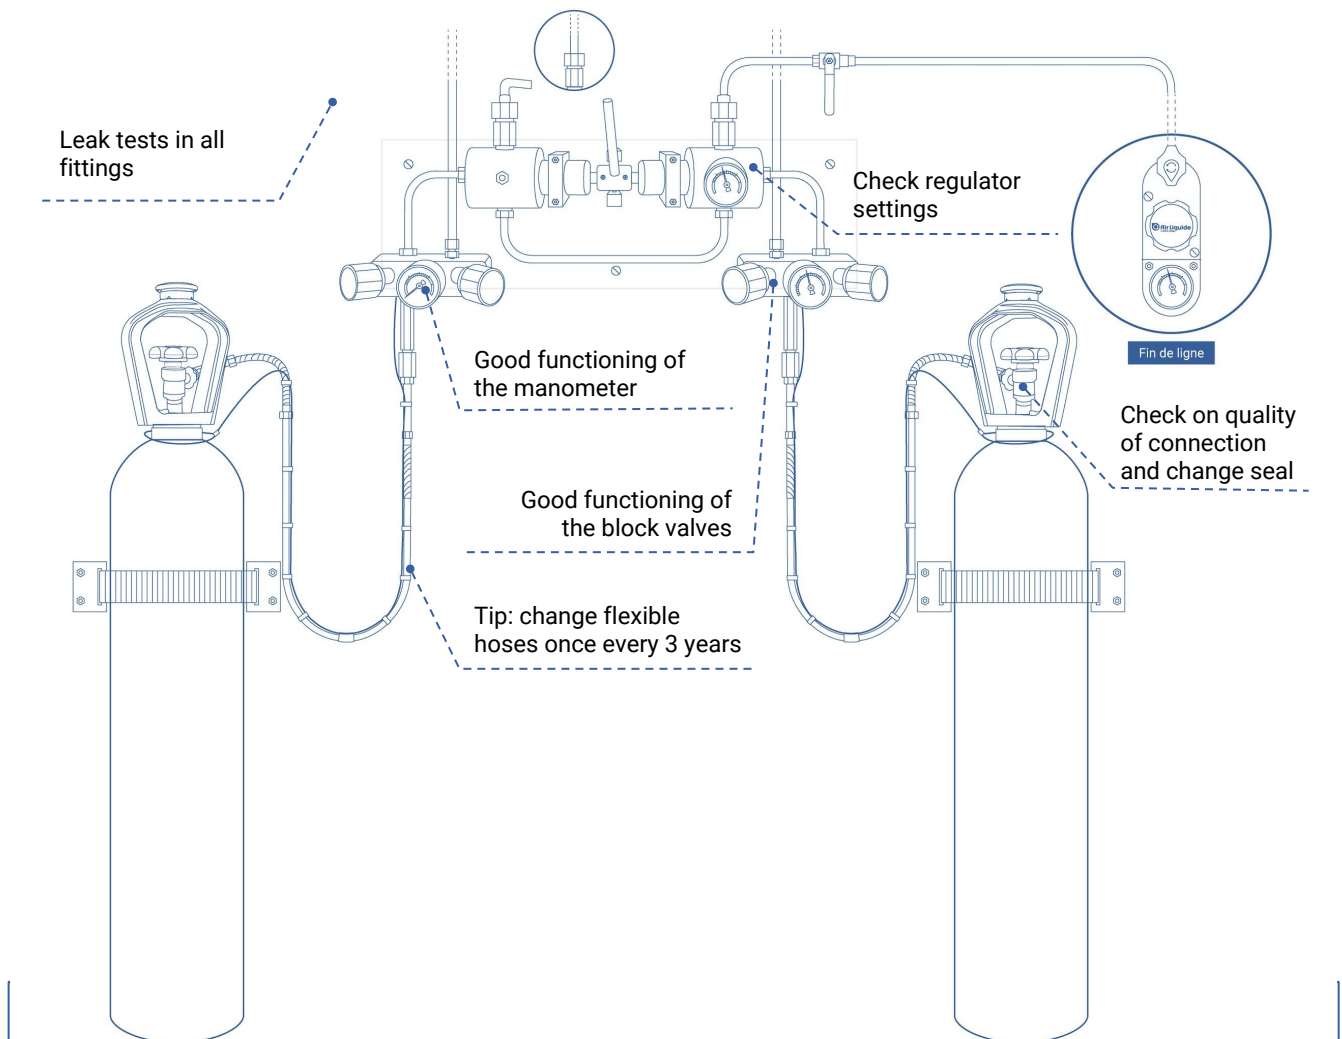

◆ Safety and reliability

◆ Budget control

◆ Yearly report

Air Liquide assistance 24/7

## Checks done during the annual maintenance visit

SERVIGAS™ can also include the maintenance on other equipment upon your request.
